October 9, 2017

Mike Rupiper, Director of Environmental Resources Planning
Capital Area Regional Planning Commission
City County Building, Room 362
210 Martin Luther King Jr. Blvd.
Madison, WI 53703

Dear Mike,

The Village of Waunakee requests that the Capital Area Regional Planning Commission (CARPC) approve a 117-acre Urban Services Area amendment to the southwest of the intersection of Highway Q and Woodland Drive.

The proposed amendment area is bordered on the north, east, and west by lands currently in the Urban Services Area. CAPRC previously approved two Urban Service amendments projects within immediate proximity to the proposed area. In 2013 the Commission approved the Kilkenny Farms amendment, an 18-acre project to the east of Highway Q from the proposed amendment area. And in 2014 the commission approved the Waunakee School amendment, a 40.5-acre project to the west of the proposed amendment area.

The Village of Waunakee, the Town of Westport, and the Westport-Waunakee Joint Planning Committee have been working with the developer on a proposed neighborhood plan, addressing future utility, stormwater, transportation, and recreation planning. The results of those efforts are included in the application.

The development project is in keeping with the January 16, 2017 Waunakee/Westport Joint Comprehensive Plan.

The Waunakee Plan Commission, Waunakee/Westport Joint Planning Commission, and Waunakee Village Board all have approved resolutions to submit a request for this urban services amendment.

Page 1 of 1
The Village requests that CARPC place the request for amendment on CARPC’s next administrative review cycle with appropriate public notice and associated public hearings based on a submittal date of October 9, 2017.

Sincerely,

Village of Waunakee

Todd Schmidt, Village Administrator
Village of Waunakee
Urban Service Area Amendment
October, 2017
The following documentation was assembled to support the application for an amendment to Dane County’s Urban Service Area as outlined by the Capital Area Regional Planning Commission (CARPC).

Process: The following sequence follows CARPC process and documents “Process for Service Area Amendments to the WDNR Water Quality Plan for Dane County” flow chart and “Urban Service Area Amendment Application Checklist”:

1. USA Amendment submittal
2. USA Amendment review
3. DNR administrative decision

The Village has assembled the attached material addressing the following:

1. Plan consistency
2. Intergovernmental cooperation
3. Land use
4. Natural resources
5. Utilities and stormwater management.

Attachments:

USAA Narrative: addresses CARPC Urban Service Area Amendment Application Checklist Items 1-5.

Village of Waunakee, Wisconsin
Revised November 3, 2017

NARRATIVE

Introduction

The Village of Waunakee requests that the Commission approve a 124.74 acre Urban Service Area amendment. Existing uses include: 102.74 acres of agricultural land, 3.41 acres of commercial, 10.51 acres of institutional, and 8.08 acres of single family residential. The proposed USA amendment is planned for development with single family housing, multi-use, and commercial uses. The site is currently in the Town of Westport at the southwest corner of the intersection of Highway Q and Woodland Drive.

1.1 Plan Consistency

Included in the Appendix is the Future Land Use Plan Map (Map 3.3b) from the Comprehensive Plan adopted by the Village of Waunakee and Town of Westport in January, 2017. The proposed amendment area is shown in the joint planning documents as Commercial along Highway Q, and headed west, a strip of Mixed Use, with the remainder of the amended area to the west as Community Residential. There are existing properties consisting of First Presbyterian Church, Cress Funeral Home, and single family residence, which are to remain.

1.2 Neighborhood Plan

The proposed Neighborhood plan (see Appendix Map 3.2) delineates the proposed community residential, mixed use, commercial, and institutional uses. A portion of the proposed development is within the existing USA, and indicated as such on the plan. The proposal will include a continuation of the existing developed uses, and will propose commercial, mixed use and multi-family uses along CTH Q, and parks and detached single family uses located in the balance of the site. The area of the proposed plan is approximately 141.75 acres, 116.66 acres of which are within the proposed area of Urban Service Area expansion.

The parcel to the northwest (#080918186500) of the proposed neighborhood plan will remain undeveloped and will not be connected to the proposed water and sanitary systems.

1.3 Need for the addition to the USA

Waunakee is a growing community. It is estimated that by the year 2040 the population is projected to increase to 17,530 (45% increase over the 2010 census population). That increase will require additional housing units and neighborhood commercial areas be built.

This amendment area supports the Village and Town’s housing goals of fostering social interaction and bike pedestrian access, providing adequate access, drainage, park and recreation facilities, and amenities to the residents, and locating housing in areas that are readily accessible to schools, parks, and neighborhood business districts. Waunakee Intermediate School, Waunakee Community Middle School, and Waunakee High School are all within one mile of the site.
This amendment area also supports the Village and Town’s economic prosperity goals. The 2007 Village of Waunakee Comprehensive Plan Amendment Future Land Use plan indicates potential neighborhood commercial at the intersection of Woodland Drive and Highway Q. The 2017 Joint Comprehensive Plan shows a mix of Commercial, Mixed Use, and Residential lining Highway Q.

2.0 Intergovernmental Cooperation
The Village of Waunakee and the Town of Westport have planned cooperatively in their joint planning since 1996. Because the site is located in the Joint Planning area, the rezoning and site plan will need to be approved by the Joint Planning Commission.

2.1 Document Notification of Adjacent Local Governments
The Village Board, Plan Commission, and Joint Planning Commission have passed resolutions supporting the proposed USA amendment and are included in the Appendix. CARPC staff will notify the adjacent local governments of the USA Amendment request.

2.2 Adjacent Local Government
CARPC staff will compile any objections and support for the USA.

3.1 Proposed USAA Boundary Map
The existing and proposed Urban Services Area boundary are indicated in Map 3.1 of the Appendix.

3.3 Existing and Proposed Land Uses Map
The existing and proposed land uses surrounding the proposed USA amendment are shown in the Appendix on Maps 3.3a and 3.3b. The land use plans were developed by the Village of Waunakee and the Town of Westport for the 2017 Comprehensive Plan.

3.4 Housing
The housing development within the proposed USA will contain a mix of single family and multi-family housing. Within the proposed USA boundary there are 190 proposed detached single family house lots, and 5.62 acres of proposed multifamily housing, providing approximately 225 units.

3.5 Development Staging
A development staging map indicating 10-year staging boundaries is shown on Appendix Map 3.5, and is based on the capacities of the existing sanitary system and future improvements. Three phases are proposed. Phase One will develop the eastern portion of detached single family residential and a small portion of mixed use and commercial land uses south of Peaceful Valley Parkway. Phase Two will develop the western portion of detached single family residential. Phase Three will develop the mixed use north and east of Peaceful Valley Parkway.

4.1 Natural Resources
See Appendix Map 4.1a for DNR wetland delineations and existing topography, Map 4.1b for Environmental Corridors, and Map 4.1c for existing soils.

4.2 Public Outlots: Parks and Stormwater Management Facilities
Public outlots intended for parks and stormwater management facilities are indicated on the Proposed Neighborhood Plan (See Appendix Map 3.2). A network of off-street paths and on-street sidewalks will provide connectivity throughout the development and to neighboring lands.

4.3 + 4.4 Environmental Corridors – Identification and Mapping
We will work with CARPC staff to delineate Environmental Corridors, and indicate them on a map of the amendment area. (Existing Environmental Corridors on adjacent properties are shown on Appendix Map 4.1b.)

5.1 Describe and Provide a Map of the Proposed Sanitary Sewer Extension
The amendment area will be served by sanitary sewers off of two separate gravity sanitary sewers from the east. One sanitary sewer will serve the area along Peaceful Valley Parkway and the eastern half of Ring Road. This 8-inch sanitary sewer will then connect into existing sanitary facilities west of CTH Q across from the First Presbyterian Church. The sanitary sewer, which will vary in size from 8-inches to 10-inches, will serve the western half of the proposed Ring Road along with the portion of Pasadena Parkway south of Woodland Drive. This sanitary sewer will lead south to an existing 15-inch sanitary sewer west of the CTH Q/Water Wheel Drive intersection. (See Appendix Map 5.1 Sanitary Sewer added to Urban Service Area)
5.2 Provide an Average Daily Flow and Peak Flow for the USAA

In order to provide an accurate representation of the average daily flow and peak flow anticipated for the USAA, multiple total basin areas and peaking factors were utilized. All forecasted flows are calculated using anticipated land uses. Currently an area north of the proposed USAA is included in the existing urban service area, however as a result of the proposed development the land use in this area will change. A peaking factor of 4.0 will be used due to the sanitary basin being smaller than 250 acres. The average daily flow for the overall development area is 163,100 gallons/day and the peak wastewater flow will be 423 gallons/minute. The average daily flow for the USAA area only is 107,000 gallons/day and the peak wastewater flow is 281 gallons/minute.

The overall development area will be split into two sub-basins for the purpose of maximizing the area which can be served by the 8” sanitary sewer. These sub-basins are the northeast portion of the development and the southwest portion of the development. The northeast sub-basin contains the area along Peaceful Valley Parkway and the eastern half of Ring Road. The southwestern sub-basin contains the area along western half of Ring Road and the portion of Pasadena Parkway south of Woodland Drive. Due to these sub-basins entering the existing sanitary systems at different locations, the flows have been calculated for each sub-basin separately. The average daily flow for the northeast sub-basin is 129,700 gallons/day with a peak wastewater flow of 338 gallons/minute. The average daily flow for the southwest sub-basin is 33,400 gallons/day with a peak wastewater flow of 85 gallons/minute.

Capacities at the Blue Ridge Pumping Station will be a limiting factor in determining how much additional flow can be added to the existing sanitary facilities without upgrades. When looking at the pumping station contributing area, the residential peaking factor is reduced from 4.0 to 2.5 due to the analyzed basin size being increased to 563 acres. The average daily flow for the overall development and the USAA will remain the same, however the peak wastewater flows will decrease from 281 gallons/minute to 186 gallons/minute respectively as they get to the pumping station. All of the forecasted sanitary loadings and proposed land use areas used can be seen below in Table 2.

Table 2: Forecasted Sanitary Flows Based on Anticipated Land Use

5.3 Provide Current Average Daily Flow for the Interceptor Sewer

The Blue Ridge Pumping Station and downstream 12-inch interceptor serve the proposed USAA. The theoretical current average flow at the Blue Ridge Pumping Station is 238 gallons/minute. This theoretical average daily flow is based on flows coming from the development east of CTH Q. Currently this area is the only sub-section of the sanitary basin contributing to the Blue Ridge Pumping Station. The average daily flow is not currently monitored at the pumping station.
5.4 Describe the Interceptor Sewer Capacity to Serve the USAA
The current capacity at the Blue Ridge Pump Station is 450 gallons/minute. This pumping station is capable of being upgraded to a capacity of 900 gallons/minute in the future. The interceptor sewer capacity is currently controlled by the Blue Ridge Pumping Station. Once the pumping station is upgraded, the gravity sanitary sewer downstream of the force main from the Blue Ridge Pumping Station will control the interceptor capacity. The capacity of the downstream gravity sanitary is currently 715 gallons/minute.

In order to check the impact of the development on the downstream sanitary facilities, the sanitary flows from the entire development were used. While the USAA is only a portion of the overall development, the change in land use dictates that all generated flows should be included when the downstream capacities are begin analyzed.

Based on the existing theoretical flows at the Blue Ridge Pumping Station and forecasted flows generated by the entire development, the theoretical flow at the pumping station will be increased to 521 gallons/minute. This increase exceeds the current capacity of the Blue Ridge Pumping Station. Additional monitoring of this pumping station should be implemented to provide more accurate existing flow data before any upgrade determination will need to be made. Monitoring should also be implemented downstream of the forcemain leading from the pumping station. The 12” sanitary sewer downstream of the forcemain has a capacity of 715 gallons/minute and a current theoretical flow of 590 gallons/minute. The additional flow from the USAA would theoretically increase the flow in this downstream sewer to 873 gallons/minute, exceeding the capacity. The monitoring of this sanitary sewer would provide additional data to project whether the sanitary sewer will need to be upgraded. Monitoring will be performed by the village testing current incoming flows into and out of the Blue Ridge Pumping Station. Testing will continue to be done annually and will increase in frequency as the pumping station reaches capacity.

5.5 Describe and Provide a Map of the Proposed Water Main Extension
The USAA will be connected to the existing system by a 12” watermain extending from across CTH Q at the CTH Q/Water Wheel Drive intersection and a 10” watermain extending across CTH Q at the CTH Q/Peaceful Valley Parkway intersection. The 12” watermain extends across CTH Q and enters the USAA from the south. The 12” watermain then continues west along Ring Road and is stubbed at the proposed road to connect to the parcel to the west. The 10” watermain extends across CTH Q and follows Peaceful Valley Parkway to the north where it will be connected into the existing 10” watermain along Woodland Drive. The remainder of the USAA will be serviced by 8” watermain along the public and private roadways. The proposed watermain layout can be seen in Appendix Map 5.5.

5.6 Provide an Estimate of the Average Daily and Peak Hourly Water Demand
The proposed USAA consists of 39.91 acres of single family residential property, 5.62 acres of multi-family residential property, 10.51 acres of institutional area (Presbyterian Church), and 6.72 acres of Commercial area. Based on these land uses, the forecasted average daily water use for the USAA is 207,000 gallons/day. Using a conservative peaking factor of 5.0, the peak hourly water usage for the USAA is forecasted to be 43,000 gallons/hour.
5.7 Provide Current Capacity of the Water Supply System
Currently the average daily demand on the existing water supply system is 1,400,000 gallons/day. Using a maximum daily demand multiplier of 2.5 and a peak hourly demand ratio of 2.0, it can be calculated that the current peak hourly demand for the existing water supply system is 4,850 gallons/minute.

5.8 Describe the Current Capacity of the Water Supply System
The Village of Waunakee’s water distribution system is comprised of five groundwater wells, four elevated tanks, three booster stations, one ground-level reservoir, and approximately 61 miles of distribution main ranging from 6 to 12 inches in diameter. The groundwater wells are capable of providing approximately 5,320 gallons/minute. The elevated storage tanks have the capability of providing service to an elevation of up to an elevation of 960 feet. The combined capacity of the four elevated tanks and the ground-level reservoir is 1,350,000 gallons.

5.9 Describe and Provide a Map of the Proposed Stormwater Management
The proposed amendment area will drain to a regional system of detention basins to be located to the west and south of Ring Road from its intersection with Pasadena Parkway to the southern edge of the USAA. Additionally, private and public roadways within the residential portion of the development will be constructed as boulevards with the center island serving as a bioretention basin. This basin will be planted with a variety of appropriate vegetation to infiltrate storm water runoff from the roadways. Any additional runoff not infiltrated will be diverted to drain to the previously described detention basins. See Appendix Map 3.2 for proposed locations of stormwater management facilities. The stormwater facilities designed as part of this part of this development will infiltrate 100% of the increased post-development runoff from the 100-year, 24-hour design storm.

5.10 Explain the Responsible Parties for Management and Maintenance of Stormwater Facilities
The developer will be responsible for maintaining all stormwater facilities during construction to ensure proper erosion control standards are met. The system of detention basins and the bioretention basins within the public roadways will be dedicated to the Village of Waunakee upon completion for ownership and maintenance purposes. Bioretention basins within private roadways will be maintained by the proper maintenance entity (homeowners association, etc.) setup by the developer’s agreement. Any new commercial development within the amendment area will be responsible for the construction and maintenance of private stormwater facilities to treat and infiltrate the first one half inch of run-off on site.

RESOLUTION NO. 17-03

VILLAGE OF WAUNAKEE PLAN COMMISSION

Resolution Recommending Submission of an Urban Service Area Amendment to the Capital Area Regional Planning Commission

Finding it to be in the public interest, the Plan Commission of the Village of Waunakee, Dane County, Wisconsin, RESOLVES as follows:

1. The proposed 116.66-acre Urban Service Area amendment involving property at the southwest corner of the intersection of County Highway Q and Woodland Drive is consistent with the 2017 Waunakee/Westport Joint Comprehensive Plan.

2. The Plan Commission recommends to the Waunakee Village Board that the Board seek inclusion of the property in the Village of Waunakee Urban Service Area and file the necessary documentation with the Capital Area Regional Planning Commission.

The foregoing resolution was duly adopted by the Village of Waunakee Plan Commission at a meeting held on September 11, 2017.

WAUNAKEE/WESTPORT
JOINT PLANNING COMMISSION

Resolution Recommending Submission of an Urban Service Area Amendment to the Capital Area Regional Planning Commission

Finding it to be in the public interest, the Joint Planning Commission of the Village of Waunakee and the Town of Westport, Dane County, Wisconsin, RESOLVES as follows:

1. The proposed 116.66-acre Urban Service Area amendment involving property at the southwest corner of the intersection of County Highway Q and Woodland Drive is consistent with the 2017 Waunakee/Westport Joint Comprehensive Plan.

2. The Joint Planning Commission recommends to the Waunakee Village Board that the Board seek inclusion of the property in the Village of Waunakee Urban Service Area and file the necessary documentation with the Capital Area Regional Planning Commission.

The foregoing resolution was duly adopted by the Waunakee/Westport Joint Planning Commission at a meeting held on September 12, 2017.

TOWN OF WESTPORT
RESOLUTION NO. 17-15

RESOLUTION AUTHORIZING SUBMISSION OF AN URBAN SERVICE AREA AMENDMENT TO THE CAPITAL AREA REGIONAL PLANNING COMMISSION (Woodland West Neighborhood)

Finding it to be in the public interest, the Town Board of Supervisors of the Town of Westport, Dane County, Wisconsin, hereby RESOLVES as follows:

1. The Proposed 116.66-acre Urban Service Area amendment involving property at the southwest corner of the intersection of CTH Q and Woodland Drive (map at Exhibit A) is consistent with the 2017 Waunakee/Westport Joint Comprehensive Plan.

2. The Town Board approves inclusion of the property in the Village of Waunakee Urban Service Area and authorizes Town staff to cooperate with Village staff to file the necessary documentation with the Capital Area Regional Planning Commission.

The above and foregoing Resolution was duly adopted by Town of Westport Board at a legal meeting held on the 18th day of September, 2017.
